

Packaging Information - General Purpose

Purpose:

The purpose of this manual section is to communicate to contracted distributors the DriscoPlex® piping systems standardize packaging materials, quantities and dimensions between all Performance Pipe plants.

Scope:

All plastic pipe packaging related product information.

Notes: This manual section provides standard packaging information. Many package dimensions in this manual are computer calculated, especially coil sizes. There may be a slight variance from the stated dimensions from plant to plant. Each plant, however, must package like quantities per unit and truckload as stated.

Packaging methods for non-standard lengths and sizes may be developed at the manufacturing plant, using the information in this manual as a resource.

The packaging methods and materials presented in this manual are recommended procedures and are not applicable to all circumstances. They may be modified to adapt to local material handling capabilities: packaging material costs, and package methods required to respond to specific customer requirements.

This manual section is provided for informational purposes only and is intended for use as a reference guide. This manual section does not constitute or confer any guarantee or warranty of any kind. Performance Pipe has made every reasonable effort towards the accuracy of the information included in this section, but it may not provide all necessary information, particularly with respect to special or unusual applications.
